Question Numbers : (46 to 47)

Question Label : Comprehension

Suppose that the market for air travel between Kolkata and Delhi is served by just two airlines, Indigo and Air India. An economist has studied this market and has estimated that the demand curves for round-trip tickets for each airline are as follows:

$Q_I^d = 10000 - 100P_I + 99P_A$ (Indigo's demand)

$Q_A^d = 10000 - 100P_A + 99P_I$ (Air India's demand)

Where P_I does Indigo charge the price, and P_A is the price charged by Air India.

Based on the above data, answer the given subquestions.

Sub questions
